

# Optimizing makepkg.conf

if you are using aur and see that compiling some software is low here is how to speed it up, and also optimize compiled a bit more for you system.

```
## /etc/makepkg.conf
```

## Replace in CFLAGS and CXXFLAGS to native

`-march=x86-64 -mtune=generic` to `-march=native`

## Speed up build times

Find the line `MAKEFLAGS` and set it to `MAKEFLAGS="-j$(nproc)"`

## Speed up compression of packages

Find the line `COMPRESSZST` and set it to `COMPRESSZST=(zstd -1 -c -z -q -)`
