

KDE

Screensharing/screencasting Issues

(zkde_screencast_unstable_v
1 does not seem to be
available)

On KDE, with `kde-plasma/xdg-desktop-portal-kde` installed, you may run into issues with OBS, Discord, and other applications which use screencasting. This is usually the result of having `kde-plasma/kwin` compiled without the `screencast` USE flag.

The fix is to append your USE flags (inside of `/etc/portage/make.conf`). e.g.:

```
USE="screencast ..."
```

Or set it as a useflag for kwin only in `/etc/portage/package.use`

```
kde-plasma/kwin screencast ...
```
